Vykuntapuram Brand Sarees: Website Product Requirements

Nov 1, 2026 · @Evuri Harika

Build a fast, mobile-first online store for Vykuntapuram Brand Sarees that takes the successful offline business online, sells to both retail shoppers and resellers, and collects every payment through Razorpay.

1. Overview and goals

Business. Vykuntapuram Brand Sarees is a profitable offline saree store that already sells on Instagram (@vykuntapuram_brand_sareesdealr, about 1,200 posts and 1,470 followers) and WhatsApp (9100648380). It positions itself on wholesale brand prices and welcomes dealers and resellers. Today, orders and enquiries are handled manually through chat.

Product vision. A professional, bright and easy-to-use website where any customer can browse, choose and pay for a saree in minutes, and where resellers can place wholesale orders without back-and-forth messaging.

Goals

- Turn Instagram and WhatsApp traffic into direct online orders.
- Give retail customers a trustworthy, mobile-friendly checkout paid through Razorpay.
- Give resellers a dedicated wholesale experience with bulk pricing and enquiry flow.
- Reduce manual order handling for the owner with a simple admin panel.
- Build brand credibility with a polished design and clear policies.

Success metrics (first 90 days after launch)

Metric	Target
Mobile page load (Largest Contentful Paint)	Under 2.5 seconds on 4G
Checkout completion rate	At least 60% of started checkouts
Payment success rate through Razorpay	At least 95% of attempts
Share of orders needing manual follow-up	Under 15%

Metric	Target
Reseller registrations	At least 50

2. Users and business model

User	Who they are	What they need
Retail shopper	Women (and gift buyers) aged 20 to 55, mostly on mobile, coming from Instagram, WhatsApp or Google	Clear photos, honest prices, easy filters, safe payment, delivery tracking
Reseller or dealer	Boutique owners and home-based resellers who buy in volume	Wholesale price list, minimum order rules, quick enquiry, repeat ordering
Store owner and staff	Owner and one or two team members, not technical	Add products in minutes, see orders, update stock, no coding

Business rules taken from the current store

- Prices are wholesale brand prices; the site must make this a visible selling point.
- Open dealership: resellers are welcome and need a dedicated entry point.
- Returns are accepted only for damaged items. This policy must be shown on product pages, at checkout and on a Returns page, and customers must accept it before paying.
- Customers should always have a one-tap WhatsApp option for questions.

3. Scope

Area	Release 1 (launch)	Release 2 (later)
Catalogue	Categories, filters, search, product pages with image gallery	Video on product pages, size and fabric guides
Buying	Cart, guest and account checkout, Razorpay payment, order emails and WhatsApp updates	Wishlists, coupons, abandoned-cart reminders

Area	Release 1 (launch)	Release 2 (later)
Wholesale	Reseller registration, wholesale enquiry form, WhatsApp catalogue request	Approved-reseller login with bulk price tiers and minimum order quantity
Admin	Product, stock, order and customer management, shipping status updates	Sales reports, staff roles, bulk product upload
Marketing	SEO, Instagram feed, WhatsApp chat button, Google Analytics	Reviews, loyalty points, email newsletter
Out of scope	Mobile app, multi-vendor marketplace, international shipping	Revisit after launch

4. Pages and navigation

Top menu: Home, Shop (with category mega-menu), Wholesale, About, Contact, plus search, account and cart icons. A sticky WhatsApp button appears on every page.

Page	Key content
Home	Hero banner with offer, shop-by-category tiles, new arrivals, best sellers, "Wholesale brand prices" trust strip, Instagram feed, customer photos, store photos
Shop and category	Product grid, filters (fabric, colour, price, occasion, weave type), sort, pagination or infinite scroll
Product detail	Image gallery with zoom, price, fabric, length, blouse piece details, colour options, stock status, delivery estimate, "Add to cart", "Buy now", "Ask on WhatsApp", returns note, related products
Cart	Items, quantities, price breakdown, shipping estimate, coupon field (Release 2)
Checkout	Address, delivery option, order summary, returns-policy checkbox, Razorpay payment
Order confirmation and tracking	Order number, status timeline, invoice download

Page	Key content
Account	Orders, addresses, profile, saved items
Wholesale	Benefits, how it works, reseller registration form, request-catalogue button
About	Store story, offline shop photos and address, map, team
Contact	Address, phone, WhatsApp, enquiry form, Google Map
Policies	Shipping, Returns (damages only), Privacy, Terms, Refund and cancellation
404 and search results	Friendly message with popular categories

5. Functional requirements

Priority key: **P0** must be in launch, **P1** should be in launch, **P2** is Release 2.

Catalogue and search

- **FR-1 (P0)** Products have title, SKU, category, fabric, colour, weave, occasion, price, optional MRP, stock count, 4 to 8 images, description and care notes.
- **FR-2 (P0)** Filters by category, price range, colour, fabric and occasion; sort by newest, price and popularity.
- **FR-3 (P0)** Search with spelling tolerance and suggestions as the user types.
- **FR-4 (P1)** Out-of-stock items stay visible with a "Notify me on WhatsApp" option.
- **FR-5 (P2)** Product video and 360-degree style views.

Cart and checkout

- **FR-6 (P0)** Persistent cart for guests and logged-in users.
- **FR-7 (P0)** Guest checkout using mobile number and OTP; account creation is optional.
- **FR-8 (P0)** Address form with PIN code check, auto-fill of city and state, and delivery estimate.
- **FR-9 (P0)** The customer must tick an agreement that returns are accepted only for damaged items before the Pay button activates.

- **FR-10 (P0)** Order summary shows item total, shipping, taxes (GST included) and final payable amount.
- **FR-11 (P1)** Cash on delivery is not offered at launch; confirm with owner (see open questions).

Accounts and notifications

- **FR-12 (P0)** Login with mobile OTP (primary) or email and password.
- **FR-13 (P0)** Order confirmation, payment receipt and shipping updates by email and WhatsApp.
- **FR-14 (P1)** Customers can download a GST invoice for each order.

Wholesale and reseller

- **FR-15 (P0)** Reseller registration form: name, shop name, city, GST number (optional), phone, expected monthly volume.
- **FR-16 (P0)** Submissions reach the owner by email and WhatsApp and appear in the admin panel.
- **FR-17 (P0)** One-tap "Get wholesale catalogue on WhatsApp" button linking to the store's WhatsApp number.
- **FR-18 (P2)** Approved resellers log in to see bulk price tiers and minimum order quantity, and can reorder previous orders.

Admin panel

- **FR-19 (P0)** Secure login for owner and staff.
- **FR-20 (P0)** Add, edit, hide and delete products with multi-image upload and automatic image compression.
- **FR-21 (P0)** Stock updates, with low-stock alert.
- **FR-22 (P0)** Order list with filters, payment status, and status changes (Placed, Packed, Shipped, Delivered, Cancelled, Return requested for damage).
- **FR-23 (P0)** Add courier name and tracking link; the customer is notified automatically.
- **FR-24 (P1)** Manage homepage banners, offers and featured categories without a developer.
- **FR-25 (P1)** Export orders and customers as CSV.
- **FR-26 (P2)** Sales dashboard with revenue, top products and repeat customers.

6. Razorpay payments

All online payments go through Razorpay Standard Checkout. The server is the source of truth for every amount and every payment status; the browser is never trusted.

Payment flow

1. The customer confirms the cart. The server recalculates the total from current prices and stock.
2. The server creates an order through the Razorpay Orders API (amount in paise, currency INR, the store's order number as receipt) and saves it as "Payment pending".
3. The browser opens Razorpay Checkout with the returned order id and the public key id.
4. After payment, the server verifies the payment signature using the key secret before marking the order as paid.
5. A Razorpay webhook is also received and verified, so the order is still marked correctly if the customer closes the browser. Handle at least `payment.captured`, `payment.failed` and `order.paid`, and make processing idempotent so a repeated event never creates a duplicate order.
6. The customer sees a confirmation page and receives email and WhatsApp receipts. Stock is reduced only after confirmed payment.

Requirements

- **PAY-1 (P0)** Support UPI, cards, net banking and wallets as enabled on the owner's Razorpay account; show UPI first on mobile.
- **PAY-2 (P0)** Pending orders that are not paid within 30 minutes are cancelled and their stock released.
- **PAY-3 (P0)** Failed payments let the customer retry from the same screen without refilling the address.
- **PAY-4 (P0)** Refunds for approved damage claims are triggered from the admin panel through the Razorpay Refunds API, with status shown to the customer.
- **PAY-5 (P0)** Razorpay key id and secret, and the webhook secret, are stored only in server environment variables and never exposed in browser code or the repository.
- **PAY-6 (P0)** Build and test fully in Razorpay Test Mode first, then switch to Live Mode with a go-live checklist.
- **PAY-7 (P1)** Admin can see Razorpay payment id, method and settlement status for each order.

- **PAY-8 (P2)** Offer EMI or Pay Later options if enabled on the account.

Compliance. The store never sees or stores card details. Privacy Policy, Terms, Shipping Policy and Refund and Cancellation Policy pages are required before Razorpay activates the live account, and the business details shown on the site must match the account's KYC.

7. Design and user experience

Direction. Bright, celebratory and festive, like a saree shop in full bloom, but organised and premium rather than cluttered. Large, clean saree photography on a light background lets the colours of the products stand out, while vivid accents give the brand energy.

Colour palette (the agent should treat these as starting values and confirm with the owner)

Role	Colour	Hex
Primary	Royal magenta	#C2185B
Secondary	Peacock teal	#00897B
Accent	Marigold gold	#FFB300
Highlight	Vermilion orange	#FF5722
Background	Warm ivory	#FFF8F0
Surface	White	#FFFFFF
Text	Deep plum-charcoal	#2D1B2E
Success and error	Green and red	#2E7D32 and #D32F2F

Rules: one main call-to-action colour (magenta) per screen; gold used for badges and highlights; text must keep a contrast ratio of at least 4.5:1.

Typography. A refined serif for headings (for example Playfair Display) and a clean sans-serif for body text and prices (for example Poppins or Inter). Telugu and Hindi language support in Release 2.

UX principles

- Mobile first: most traffic arrives from Instagram on phones. Design for 360 px wide screens first, then tablet and desktop.
- Thumb-friendly: large buttons, sticky "Add to cart" bar on product pages, bottom navigation for cart and account on mobile.
- Photography first: square or 4:5 images, zoom on tap, consistent backgrounds and lighting.
- Trust everywhere: wholesale-price badge, real store photos, clear returns policy, Razorpay secure payment badge, phone and WhatsApp in the header.
- Short paths: a product to payment in no more than 4 screens.
- Friendly microcopy in simple English, with a warm tone.
- Subtle motion only: soft hover and add-to-cart animations, no heavy sliders.

8. Non-functional requirements

Area	Requirement
Performance	Largest Contentful Paint under 2.5 s on mid-range phones over 4G; images served as WebP or AVIF with lazy loading; Lighthouse performance score of 85 or higher on mobile
SEO	Server-rendered pages, clean URLs, unique titles and descriptions, product structured data (schema.org Product), XML sitemap, Google Search Console and Google Business Profile set up
Security	HTTPS everywhere, hashed passwords or OTP only, input validation, rate limiting on login and OTP, admin protected by strong authentication, regular backups, no secrets in the repository
Accessibility	WCAG 2.1 AA: keyboard navigation, alt text on product images, readable contrast, visible focus states
Reliability	Uptime of at least 99.5%; daily database backups kept for 30 days; error monitoring with alerts
Browser support	Last two versions of Chrome, Safari, Edge and Firefox; Android 9 and above; iOS 14 and above

Area	Requirement
Analytics	Google Analytics 4 and Meta Pixel with purchase events; consent banner where required
Legal (India)	Privacy Policy, Terms, Shipping, and Refund and Cancellation pages; GST shown on invoices; compliance with the Digital Personal Data Protection Act principles for stored customer data
Scalability	Handle festival-season peaks (about 10 times normal traffic) without slowdowns

9. Recommended tech stack and integrations

The agent may propose an equivalent stack if it explains why, but must keep the owner's ability to manage products and orders without a developer.

Layer	Recommendation
Frontend	Next.js with React and Tailwind CSS (server-rendered, fast, SEO friendly)
Backend and database	Node.js API with PostgreSQL, or a managed backend such as Supabase
Admin panel	Custom admin inside the same app, or a headless CMS for products and banners
Image storage	Cloud storage with a CDN and automatic resizing (Cloudinary or similar)
Hosting	Vercel or a managed Indian cloud region for lower latency; custom domain with SSL
Payments	Razorpay (Orders API, Checkout, Webhooks, Refunds)
Messaging	Transactional email (for example Resend or SES) and WhatsApp Business API for order updates

Layer	Recommendation
Shipping	Shiprocket or a similar aggregator for rates, labels and tracking (Release 2 for full automation; manual tracking links at launch)
Monitoring	Sentry for errors and a basic uptime monitor

A simpler alternative, if budget or speed is the priority: Shopify with Razorpay enabled and a custom theme. The agent should compare cost, flexibility and the wholesale features before choosing, and report back.

10. Delivery plan and acceptance criteria

Instructions to the agent. Work in the phases below, share a working preview link at the end of each phase, and wait for owner feedback before starting the next. Write clean, documented code and a short README covering setup, environment variables and how to deploy.

Phase	Weeks	Output
1. Discovery and design	1 to 2	Sitemap, wireframes and visual design of Home, Shop, Product, Cart and Checkout in the bright palette; owner approval
2. Core build	3 to 5	Catalogue, search, filters, cart, accounts, admin product and stock management
3. Payments and orders	6 to 7	Razorpay in Test Mode, webhooks, order lifecycle, emails and WhatsApp messages, refunds, wholesale form
4. Content and testing	8	Real products loaded, policy pages, SEO, performance tuning, device testing, security review
5. Launch	9	Razorpay Live Mode, domain and SSL, analytics, backups, owner training, 2 weeks of launch support

The project is accepted when

- A customer on a mid-range Android phone can find a saree, pay with UPI and receive a confirmation in under 3 minutes.
- A payment made and then abandoned at the bank still ends with the right order status through the webhook.
- Cart totals, shipping and GST match the invoice to the rupee on 20 test orders.
- The owner adds a new product with 5 photos in under 5 minutes, without help.
- The returns policy (damaged items only) is visible on product pages, at checkout and in the policy page, and the checkbox blocks payment until ticked.
- Lighthouse mobile scores are at least 85 for performance and 90 for accessibility, best practices and SEO.
- No Razorpay secret appears in browser code, logs or the repository.
- A reseller can submit the registration form and the owner is notified within a minute.

☐ 11. Open questions for the store owner

The agent should ask these before Phase 1 ends and record the answers in this document.

- ☑ ~~What is the final brand name, logo and tagline, and do you have a domain name already?~~
- ☐ How many products will be listed at launch, and who will take the photos?
- ☐ Is Cash on Delivery needed, and should it carry an extra fee?
- ☐ Which courier or shipping service will be used, and what are the shipping charges (flat, by weight or free above a certain amount)?
- ☐ Do wholesale prices differ from retail prices on the site, and what are the minimum order quantities for resellers?
- ☑ ~~Is a Razorpay account already created and KYC-verified, and is GST registration in place?~~
- ☑ ~~Is the physical store address to be shown, and is local pickup allowed?~~
- ☑ ~~Should the site support Telugu or Hindi at launch?~~
- ☑ ~~Who will update products and handle orders day to day, and how many staff need admin access?~~
- ☑ ~~Are there any reference websites whose look you like or dislike?~~
